[goyawindsurfing.com](http://goyawindsurfing.com)

PRO

# Goya Windsurfing

# Custom 4 Pro Surfwave Quad

**This is it. The latest and greatest evolution from our two world champions Marcilio Browne and Francisco Goya. The Custom 4 Pro is the ultimate pro model wave board, straight from their board bag to yours, a custom performance board put into production. Carrying the MB initials for a reason.**

These all new Quads slightly grew in width at the mid section and received a bit more area for the back foot while maintaining their lengths. The profile has been thinned, compared to the last generation. Although the rockers share the same overall curve from the previous model, the all new Custom 4 Pro line incorporates a more defined surfboard rocker, with a lower entry and higher tail. This

shift in the rocker allows them to better fit into the curve of the waves while still maintaining early planning and carry speed into the turns. The bottom features a slightly shallower double concave, making the board fast and direct. A nice feature update comes with the double inserts for the back strap, eliminating strap twisting, period.

Inspired by the Goya Youth development, a new 60 liter model has been added. We felt we had to make our favorite boards available to the growing youth. This new shape includes a narrower stance and further back mast track position to better balance the lighter/smaller advanced and professional riders.

**Pro Carbon Monocoque Construction.**  
**Available in 60, 68, 74, 79, 84, 89, 94, 104, 114 liters.**  
**Neon yellow & pink on metallic gold.**  
**Short US center and Mini Tuttle side finboxes.**

New

Find the complete specs at the end of the overview.

# Custom 3 Pro Surfwave Thruster

The all new Custom 3 Pro got a bit more lively and fun all around through new progressive rockers, more parallel outlines and refined bottom shapes. More agile and surfy.

With the same core bottom curve as the previous model, they now have a lower entry and a higher tail rocker. This minus/plus rocker shift gives the boards better early planing and more natural projection off the turns. The tail and nose outline points were slightly moved out to introduce more of the parallel outline concept, delivering easy rail to rail high end performance. The new thinner profiles increase power and comfort while improving the board balance and range of use. Pairing a thruster fin set-up

with a V/Double concave bottom shape and a parallel outline, the Custom 3 Pro unifies the classic three fin combo with a modern progressive wave shape. Double inserts on the back strap virtually eliminate strap twisting. Featured on Goya Wave boards.

Marcilio enjoys riding the Thruster on smaller or onshore waves, describing the feeling as refreshing and fun, which is why the Custom 3 Pro carries his Pro model MB initials.

How does it compare to the One 3 Pro? The Custom 3 Pro has a more curved outline, designed for the more wave oriented rider, a middle ground indeed between our Custom 4 Pro and One 3 Pro.

**Pro Carbon Monocoque Construction.**  
**Available in 75, 81, 86, 91, 98, 106 liters.**  
**Neon yellow & white on metallic gold.**  
**US center and Mini Tuttle side finboxes.**

New

Find the complete specs at the end of the overview.

# One 3 Pro Freewave Thruster

The all new One 3 Pro has evolved into a progressive Freewave sailing board, with more parallel outlines, drawing from modern surfboards, while maintaining the overarching concept of being one board for Wave, Freestyle and Freeride.

The new parallel outlines improve agility and comfort on longer, choppy runs, while the resulting added tail area improves stability, early planing and comfort. All sizes now come with a swallow tail. A slightly lower entry rocker allows the board to naturally glide into a plane. The volume in the new One 3 Pro is more equally distributed along the board's profile, to create a more stable and evenly planing hull. Incorporating a shallower V and

double concave into its bottom shape increases acceleration and planing surface. All sizes are now available with Mini Tuttle side fins and Power Box center fin, for their lightness, simplicity of use, and effective compatibility with larger fins sizes.

**Pro Carbon Monocoque Construction.**

**Available in 85, 95, 105, 115 liters.**

**Neon red & blue on metallic red.**

**Powerbox center and Mini Tuttle side finboxes.**

# Air Pro Freestyle Single

**Freestylers Antoine Albert and Jay Lee talk about the latest Air Pro, pointing out their favorite facets.**

Antoine Albert: "We worked a lot on the speed and pop of the Air Pro. When I tested it for the first time, I was blown away by the limitless acceleration that this board brings, even in super choppy conditions. That speed helps a lot to go higher especially in combination with the slightly changed tail that makes the pop easier. The Air Pro is a bit narrower and slightly smaller than its previous iteration, giving you more control in stronger wind and faster spins in the air, meaning its new shape is more radical. Further, we added a smaller volume to the range for super strong wind, smaller people and kids. The Air Pro

in full production spec is following me all over the world and excels in all conditions, from Fuerteventura to Bonaire and New-Caledonia, and it allowed me to be 7th overall in last year's PWA freestyle championship."

Jay Lee: "The thick square tail design is a blessing, it gives you more grip and confidence to enter your moves faster, its release and pop send you flying higher, and it provides a wonderful forgiveness in sliding maneuvers. The Air Pro comes with an all new MFC GE Freestyle fin that works seamlessly with this new boards."

**Pro Carbon & S-Glass construction.**

**Available in 89, 99, 106 liters.**

**Neon yellow on metallic copper.**

**US center finbox.**

# Proton Pro Race Single

The third version of the Proton Pro has an extremely wide wind range. The rockers have been substantially reworked, with a slightly lower entry rocker, improving planing and top speed significantly.

The outlines have gotten more parallel, meaning a wider tail for more power and a more comfortable stance as well as a slightly wider nose that gives a bit more lift and early planing. The deck has also been closely re-examined and gotten flatter, so when you are gybing the boards are more stable. The deck around the footsteps has been made more comfortable so you can ride for longer and push harder.

The bottom shapes have been reworked with quite a lot more V and V-Concave through the entire board, giving it more power and easier railing possibilities, plus extra control. The double step cutouts are still very generous, but occupy slightly less area, less area meaning less resistance and therefore more speed, while the wider outline delivers the power needed in lighter winds. Specific size constructions for every size deliver a customized build, with carbon fibres going in specialized directions. Were the bigger boards demand more stiffness for increased efficiency, the small board come with slightly less, for more control. The rear 3/4 of the bottom come sanded bare.

**Pro Full Carbon Hull Construction.**

**Available in 97, 117, 137 liters.**

**Sizes 117, 137 come foil ready.**

**Neon yellow & white on metallic yellow.**

**Tuttle / Deep Tuttle center finbox.**

New

# Bolt Pro Freerace Single

**The Bolt Pro is our user friendly Race board, and also comes ready out of the box to be enjoyed with a foil. As a far advanced Freeride board, the Bolt Pro is crazy fast, with the power of the Proton Pro, yet with a more accessible and friendly trim.**

With its 10 mm of V, it naturally softens the ride over chop on rougher seas. As in our dedicated race board, the Bolt Pro comes with tail cut-outs in combination with a light tail release that helps reduce the wetted surface, providing you with sensational acceleration. Being the evolution of our highly successful and best selling Freerace line, the new Bolt Pro incorporates years of development, the feedback from valued customers around the world, as

well as the development of three generations of Proton Pro boards in the PWA.

Being a hybrid between its predecessor and the new Proton Pro's shallower double concave, and reduced V of the tail, the Bolt Pro's bottom shape blends the acceleration, speed and comfort of both concepts. With a slightly higher entry rocker from the previous line, it feels balanced in both flat water and the open ocean, across a long coast run, with all the speed and control. By setting the mast track deep into a concave deck, the draft of the sail is lowered, resulting in furthermore forward drive.

**Pro Full Carbon Deck Construction.**  
**Available in 97, 107, 117, 127, 137 liters.**  
**Sizes 117, 127, 137 come foil ready.**  
**Neon yellow & blue on metallic charcoal.**  
**Tuttle / Deep Tuttle center finbox.**

New

PRO

# Carrera Pro Freecarve Single

The Carrera Pro line uncompromisingly caters to Freecarve riders. The Carrera Pro sailing experience builds on agility, turning torque, and the board's supreme build.

Freecarve boards are slightly narrower than Freeride boards, designed for advanced Freeriders looking for more lively boards that are easier to fly on the rail.

There used to be a time when only Race boards were built like the Carrera Pro. And there is no other Freecarve board on the market built like it, even today. We set out to create a Freecarve board with only the very best composites applied, racing composites and full carbon

deck construction, bringing the ultimate speed sensation to a broader audience, a sensation that up until now only racers could experience.

The Carrera Pro offers utmost high-end performance whenever and wherever you want it. Matching best with the Nexus Pro Freeride, it covers all bases from rough seas to lighter winds to calmer lake conditions, and in that it is just as fun to carve as it is jaw-dropping fast.

**Pro Full Carbon Deck construction.**  
**Available in 116, 130, 144 liters.**  
**Neon blue on metallic blue.**  
**Powerbox center finbox.**

PRO

# Volar Pro Freeride Single

The Volar Pro is our ultimate Windsurfing board, to grow, learn and enjoy the sport on all levels. The board is fast, stable and accelerates with each gust of wind.

On a straight line or jibing, the Volar Pro rides naturally, giving the rider all the confidence to push their level at every move. With its thinner profile, on the water or in the air the new Volar Pro feels like an extension of your body. Each shape was individually created to match specific conditions, giving the larger volumes a proportionally wider outline, more balance and early planing needed in lighter conditions, while the smaller sizes feature an increased bottom curve and easy control demanded on

those rougher days. On top, you can seriously alter the character of these boards by simply adjusting the straps further inboard or outboard, using single double straps in its three levels of strap options.

**Pro Full Carbon Deck construction.**  
**Available in 105, 115, 130, 145 liters.**  
**Neon red on metallic red.**  
**Powerbox center finbox.**

# Volar Freeride Single

The new Volar makes the same shape and concept as the Volar Pro available in a more rugged and affordable build, ideal for schools, centers and families, while offering identical ride characteristics. A durable, tough, but still light board.

Considerably more affordable, by using a wood sandwich build around its cubed fused cell foam core, the Volar guarantees for supreme durability, making it a favorite with windsurfing centers around the world.

The Volar features unidirectional glass reinforced rails for extra stiffness in surf conditions. High grade epoxy resin

creates an impact resistant outer skin. All other features and inserts match the Pro version.

**Wood Sandwich Construction.**  
Available in 115, 130, 145, 160 liters.  
Neon red on metallic red.  
Powerbox center finbox.

# Surf Trainer Single\*

The new Surf encompasses a comprehensive line of beginner boards, covering all needs in seven sizes.

The Surf is a board that will get you through your first days, and that you will keep coming back to, even after you have mastered all the basics. The Surf guarantees anyone a fun and fast entry into the windsurfing world. The 160, 200, 220 and 260 feature a fully retractable Allgaier® dagger board for maximized stability, while the smaller 115, 130 and 145 sizes feature a regular center fin instead, for advanced learning. The Surf covers a full beginner board range and the 260 is among the biggest beginner boards on the market. This entry level

board is crafted to school requirements and your family's needs alike. The Surf features an extra thick full EVA deck, keeping your knees and your board in healthy shape for many seasons. Its bigger sizes feature EVA rails, while the smaller sizes come with clear rails. All sizes come with an integrated nose protector. All sizes furthermore feature a color coded deck graphic layout, with dedicated pad grooving and EVA density zones tailored to multiple levels of rider skill. The Surf comes with multiple straps, an integrated nose handle and an additional tail handle.

## Wood Sandwich Construction.

Available in 115, 130, 145, 160, 200, 220, 260 liters.

Tandem option: 200, 220, 260.

Gray on white.

\*Powerbox center & stability finboxes (115, 130, 145).

\*Powerbox center & daggerboard (160, 200, 220, 260).

Tandem rig insert on 200, 220 and 260.
