KT Surfing
Product Overview

ktsurfing.com

The logo consists of the letters 'K' and 'T' in a bold, italicized, sans-serif font. The 'K' and 'T' are connected at the top right, with the 'T' having a horizontal bar that extends to the right.

Crusher Pro Shortboard Thruster

The new Crusher squash tail performance shortboard line was developed for average to good waves but will also be your first choice when the waves are pumping.

It best suits high performance surfing over any range of conditions. The KT team rides this from Hawaii to Trestles to the Marshalls. It has a fast progressive rocker with just the perfect lift at the nose and tail to fit into the curve that good waves offer. It's an easy paddler with a quick get up and go.

It has a bit of a fuller outline and foam flow to support easy riding and lines. This is your go to board for all around waves. Fast, flowy and forgiving. Its rails allow for a smooth feeling when carving. The rocker has a relatively low entry with a medium release yet enough tail rocker to turn on a dime. The Crusher is the pinnacle of our custom performance models and is unrivaled when used in good swell.

Construction

Keith Teboul: "I am most excited about the new construction I have developed here in Hawaii. I call it Exo-Skeleton wrap. Basically we shape the foam to spec. We then wrap the deck of the board in our patented Flexx geometry with a uni directional carbon. The bottom has a uni direction carbon as well centered for ultimate strength. This construction allows the core to flex to its limits and yet not break because of the layout of the Exo-Skeleton wrap. The layup and carbon all work as one monocoque to create a smooth reactive flex through the whole board resulting in a quick smooth fast surfboard. The ultimate in modern technology."

EPS Core and Epoxy resin. Revolutionary FLEX•X™ stringer technology. The FLEX•X™ Dynamic Stringer Concept has been developed by Keith Teboul. While both shaping and riding experimental surfboards he realized that the flex plays an overwhelming part in whether you have a magic board or not. He set out to find a way to precisely control this flex and apply it where and how he wanted it to be. With FLEX•X™ Keith achieved just that.

Controlling the flex in boards is the future and thankfully with FLEX•X™ that future is now, transmitting the energy of the rider into the board and out towards the rails allows for both quicker and snappier turns with more direct projection. Keith developed a layup for the stringers that allows the back half of the board to

flex more and quicker, allowing for a more sensitive and snappy feeling board. Last but not least FLEX•X™ makes the board stronger and less prone to breakage since it works as a double stringer.

Available in 5'8", 5'9", 5'10", 5'11", 6'0", 6'1", 6'2", 6'4" feet.

Available in white.

Plate Lunch Pro Summer Thruster

The new Plate Lunch is a chubby squash tail new school all-around shortboard with more volume for summer days and smaller swells, offering a selection to suit everyday conditions all over the globe.

Built to keep you smiling even in the worst conditions. This board has you covered in anything from one foot onshore France to three foot Indo glass off. All sizes offer great performance, speed and forgiveness. Expanded nose and tail outlines provide early planing. Designed to help you catch more waves, paddle faster and still lay down heavy turns and big spray.

Available in 5'6", 5'8", 5'10", 5'11", 6'0", 6'1", 6'2", 6'3", 6'4" feet.

Available in white.

Fringe Pro All-Around Thruster

Keith Teboul: "So the Fringe model has been completely redesigned from rocker to foam flow to rails and construction."

A full vee bottom with double concave creates an effortless glide with a smooth rail to rail turning. Drivey when you need it more pivot when you push. A quick paddler and very stable ride.

Rockers offer a nice smooth entry with subtle slow smooth constant curve between the stance and a bit of tail release to allow the board to finish the turns. This along with the vee makes for a quick snappy responsive ride."

An easy to ride squash tail performance board offering great stability and smooth paddling. The smaller Fringe sizes are fun and easy fish outlines. These boards are all about getting the maximum out of small or not so powerful wave sessions. A fuller outline for ease of paddling and catching waves, and a narrower tail allow for quick accelerating turns. As the line evolves it moves into fuller and wider outlines on the bigger boards. These are all about getting your first shorter board that is forgiving enough to finish rides. It's a great all around board for learning and progressing your surfing. The Fringe is as at home in punchy waves, clean point breaks or mushy beach break.

Construction

I am most excited about the new construction I have developed here in Hawaii. I call it Exo-Skeleton wrap. Basically we shape the eps foam to spec. We then wrap the deck of the board in our patented Flexx geometry with a uni directional carbon. The bottom has a uni direction carbon as well centered for ultimate strength.

This construction allows the core to flex to its limits and yet not break because of the layout of the Exo-Skeleton wrap. The layup and carbon all work as one monocoque to create a smooth reactive flex through the whole board resulting in a quick smooth fast surfboard. The ultimate in modern technology.

Available in 5'6", 5'8", 5'10", 6'0", 6'2", 6'4", 6'8", 7'0", 7'6", 8'0" feet.

Available in white.

Yardstick Pro Longboard Single

Size matters. And longboards will never go out of style. Facts. The all new Yardstick is a highly refined squash tail longboard that's versatile in all sizes of waves.

Shaped for easy nose riding, silky turning and gliding on the tail at speed alike. A higher rocker and deep detailed double concaves hold the board predictably on any steep wall. Quick responsive turns off the tail. US box center fin.

Construction

PU Core and Polyester resin. A performance quality build makes these boards incredibly rewarding and equally affordable. Center glass stringer.

Available in 9'0" feet.

Available in white.
